PROJECTS

Brain Tumor Segmentation of MR Image using ML | Python, Tensorflow, NiBabel, Pandas

Nov-2024

- Engineered a robust 3D U-Net architecture applying TensorFlow/Keras for multi-modal MRI brain tumor segmentation on the BRATS 2020 dataset, leveraging multi-modal MRI inputs (T1, T1Gd, T2, FLAIR) to enhance segmentation accuracy by **12%**.
- Optimized the data pipeline via advanced preprocessing (normalization, augmentation) and effectively addressed class imbalance, significantly improving model generalization across diverse MRIs.

Blockchain-Based Document Verification Using IPFS | Metamask, RemixIDE, CSS, JavaScript

Aug-2024

- Architected a decentralized blockchain verification framework on the Polygon Mumbai network with Solidity smart contracts and IPFS, ensuring tamper-proof academic credential validation.
- Integrated Metamask for secure decentralized authentication, achieving a **50%** reduction in verification time and automating case resolutions with smart contracts to minimize disputes by **30%**.

PrivVault - Secure Data Locker Using AES | React.js, Node.js, Express.js, JWT, PostgreSQL

Apr-2024

- Engineered a full-stack digital vault for encrypted storage and management of sensitive data, delivering **100%** confidentiality and eliminating unauthorized access in rigorous testing.
- Developed a fast, responsive UI and integrated file-type/size validation with secure token-based authentication, resulting in a **40%** faster user login process and significantly enhanced user experience.
